PO-CHUN CHIEN

(+886)0970760058 r07943091@ntu.edu.tw

RESEARCH INTERESTS

Formal Verification: Soft/Hard-ware Model Checking, QBF/SAT Solving, Automata Theory
Electronic Design Automation (EDA): Logic Synthesis & Optimization, Computation Models
Machine Learning (ML): Deep Learning (DL), Machine Comprehension

SKILLS

Programming: proficient in **C/C++, Python, VerilogHDL**, Cadence Skill, MATLAB
Language: Mandarin Chinese, **English (IELTS 7.5, TOEFL 103, GRE 155/170/4.0)**

EDUCATION

Received both B.S. and M.S. degree from **National Taiwan University** (NTU). *Taipei, Taiwan*

M.S. in Graduate Institute of Electronics Engineering (GIEE) *Sep. 2018 - June 2020*

- Major in EDA, instructed by Prof. Jie-Hong Roland Jiang of ALCom Lab
- Overall GPA: 4.22 / 4.30

B.S. in Department of Electrical Engineering *Sep. 2015 - June 2018*

- Overall GPA: 4.16 / 4.30 *Top 5%*

ACADEMIC/CONTEST AWARDS

1st place in the Chinese Institute of Electrical Engineering Thesis Award *Oct. 2020*
1st place in 2019 ICCAD CADathlon *Nov. 2019*
1st place in Formosa Grand Challenge "Taking with AI" *Mar. 2019*
GIEE scholarship * 4 semesters *Sep. 2018 - June 2020*
TSMC-NTU scholarship * 2 semesters *Sep. 2017 - June 2018*
NTU Presidential Award * 2 semesters *Sep. 2016 - June 2017*

PUBLICATIONS

P.-C. Chien and J.-H. Jiang. Time Multiplexing via Circuit Folding. In Proc. of the IEEE/ACM Design Automation Conference (DAC), 2020.

P.-C. Chien. Circuit Folding: From Combinational to Sequential Circuits. Master's Thesis, National Taiwan University, 2020.

P.-C. Chien and J.-H. Jiang. Time-frame Folding: Back to the Sequentiality. In Proc. of the IEEE/ACM International Conference of Computer-Aided Design (ICCAD), 2019.

WORK EXPERIENCE

Research Assistant in ALCom Lab at NTU *July 2020 - present*
Teaching Assistant of "Introduction to EDA" at NTU *Mar. - July 2020*
Teaching Assistant of "Introduction to EDA" at NTU *Mar. - July 2019*
Teaching Assistant of "DL for Human Language Processing" at NTU *Sep. 2018 - Jan. 2019*
Teaching Assistant of "Advanced Deep Learning" at NTU *Mar. - July 2018*
Summer Intern at MediaTek ADCT/PDK Dept. *Hsinchu, July - Aug. 2018*

- Develop an automatic virtual-pin labeler for LVS on analog circuits.

RESEARCH PROJECTS

X-value Combinational Equivalence Checking *July 2020 - present*

- Verify the equivalence of 2 low-power netlists, which generate X-value under the power-shutoff behavior.
- Construct the miter circuit with dual-rail encoding, and adopt various optimization techniques.
- Identify and utilize the compatible equivalence relations of internal signals to guide the SAT solver.

Machine Learning + Logic Synthesis *May 2020 - present*

- Learn an unknown Boolean function from a training set consisting of input-output pairs.
- The learned function is in the form of And-Inverter Graph with strict hardware cost (≤ 5000 gates).
- Methods: decision tree with fringe-feature detection, and neural network with pruning and quantization.
- Our team ranked 4^{th} in the IWLS 2020 Programming Contest (evaluated by the testing accuracy).

Time Multiplexing (TM) via Circuit Folding *Nov. 2019 - July 2020*

- The research manuscript was accepted and published by **DAC 2020**.
- TM is an important technique to overcome the I/O bandwidth bottleneck of FPGAs.
- Our new formulation achieves TM through structural and functional circuit folding at the logic level.
- Experiments show the effectiveness of the structural method and improved optimality of the functional method on look-up-table and flip-flop usage.

Time-Frame Folding (TFF): Back to the Sequentiality *Sep. 2018 - Nov. 2019*

- The research manuscript was accepted and published by **ICCAD 2019**.
- TFF is the reverse operation of time-frame expansion. It constructs a sequential circuit from an k-iterative combinational circuit.
- The constructed circuit is equivalent to the original circuit within the bounded time-frames k.
- Empirical evaluation demonstrates its ability in circuit size compaction and suggests potential use in testbench generation and bounded strategy generalization.

Formosa Grand Challenge "Taking with AI" *June 2018 - Mar. 2019*

- A nationwide ML competition hosted by Taiwan Ministry of Science and Technology.
- The goal is to build a conversational AI agent that understands Mandarin Chinese.
- Our team **ranked 1^{st}** in the competition and won the final prize.

Neural Network using Stochastic Computing *Sep. 2017 - June 2018*

- Implement Multiply-Accumulate (MAC) and various operations via stochastic computation.
- Build a neural network with lower hardware cost in terms of power consumption area-delay product on FPGA boards (Altera DE10-nano).
- **Regional Finalist** in Greater China of Innovate FPGA 2018.

RELATED COURSEWORK

Verif.	SoC Verification, Logic Synthesis & Verification, Algorithms
EDA	VLSI Testing, Physical Design, Data Structure & Programming
ML	ML & have it deep and structured, Advanced DL, DL for Human Language Processing
Others	Advanced Computer Architecture, Digital Signal Processing, Introduction to Cryptography

PERSONAL TRAITS

Highly motivated and eager to learn new things.

Capable of working as an individual as well as in groups.

Hard-working and good at time management.
